Field harvested and chopped by
Cressoni corn head with stalk chopper

Field harvested with corn head
without stalk chopper

Increase chop and harvest quality with Cressoni corn head

Stalk rolls with **5** knives

+25%
Stalk precut

- The best stalk precut, to obtain the best stalk-chopping quality in the market
- Requires less power
- Larger diameter, higher speed and lower RPM for better stalk pulling than old style rolls in the market

Folding 12x30"

HARVEST AND CHOP AT THE SAME TIME

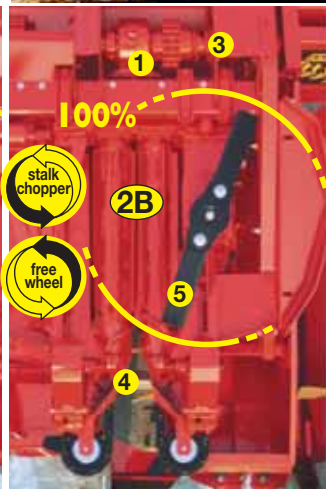

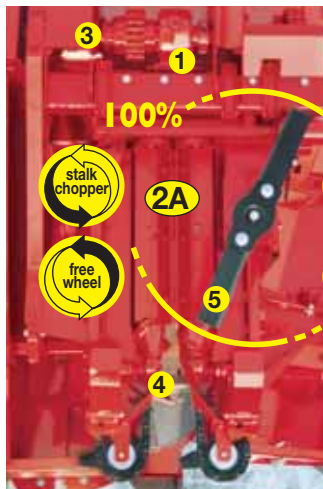

FOLDING AND FIX CORN HEADS

OPTIONAL

POLYETHYLENE DIVIDERS & SNOOTS
made in USA

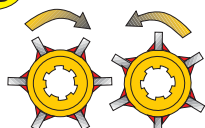

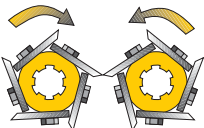

The forward position of the stalk choppers covers **100%** of the rolls' pulling area. This system assures an optimal chop of the stalks, which pass from the rolls directly to the working area of the chopper. The working areas of the rolls and the choppers fully correspond and are overlapped, and therefore allow the chopping of the entire stalk's length in small pieces-starting at a minimum safety distance of 3 inches from the ground.

2A Stalk rolls with 5 knives.

2B Standard steel stalk rolls.

+25%
Stalk precut

1 The GIGAN ALUX corn head is equipped with tempered aluminium alloy gearboxes

that enclose power transmission to the stalk rolls, the chains and the stalk chopper (if required). The steel gears undergo a treatment of carbonising, hardening and drawing, constantly lubricated in an oil bath. A characteristic addition is the modularity of the box, thus gaining in lightness and mechanical toughness.

2 The stalk rolls may be with 5 sharpened knives **2A** or steel heat-treated **2B**.

3 Each row unit is equipped with an independent adjustable clutch which protects it from overloads, thus avoiding breakages and ensuring

safety and reliability under various harvesting conditions.

4 Hydraulically adjustable deck plates let you quickly adapt corn head performance to varying harvesting conditions.

5 The low power absorption stalk chopper mounted on each row unit is easily engaged and disengaged.

6 in accordance with customer's needs and without jeopardising the working of the head.

A highly important mechanical note is the use, in each stalk chopper unit, of a free wheel which avoids overloads and heavy recoils, due to normal stops, acting on gears, shafts, bearings, with the advantage of an extended working life for the protected mechanical parts.

Lateral drive chains lubricated in oil bath.

OPTIONAL
POLYETHYLENE DIVIDERS & SNOOTS
made in USA

Head inclination easily variable.
